

EXPERIENCE

Wells Fargo <i>Software Engineer II</i>	West Des Moines, IA <i>May 2025 – Present</i>
- Design and develop AI document validation agents on an internal Generative AI platform used by mortgage officers and underwriters, automating asset and bank balance verification for mortgage decisioning via prompt engineering and structured agentic workflows, platform serving 100M+ annual interactions - Identified root cause of a recurring production out-of-memory crash caused by unbounded async calls and Camunda database connections driving thread exhaustion, traced via Splunk log analysis, enabling the team to implement connection pool limits and async call bounds that resolved months of instability - Delivered a greenfield microservice to production in under 4 months using Java/Spring Boot, Kafka, and MongoDB, orchestrating third-party APIs for real-time mortgage decisioning with zero production defects - Designed and implemented event-driven Kafka consumer pipelines for loan origination event processing at millions of transactions daily, developing consumer logic for reliable data transformation across distributed systems - Remediated 98,455 security vulnerabilities across the codebase in under 3 weeks, leveraging GitHub Copilot and SonarQube to triage by severity, refine AI-generated fixes, and resolve edge cases through iterative review and testing - Delivered new features across a Java backend service and Angular web application for loan pipeline management in under 10 days, owning full-stack development, testing, and production release end-to-end - Proposed and delivered automation of a week-long monthly regression process, building a BDD test pipeline on HyperExecute to parallelize and stabilize execution, reclaiming 1 week of engineering capacity per month - Owned features end-to-end from business requirements to bi-weekly demos, presenting new features to technical and non-technical stakeholders and incorporating feedback into delivery	
8AM App <i>Data Engineer Intern</i>	Los Angeles, CA <i>September 2023 – December 2023</i>
Analyzed Stripe revenue and customer behavior data across 1,000+ users over 5 years at an early-stage startup, building data pipelines in Python (Pandas, NumPy) to identify churn drivers and retention patterns that directly informed the company's pivot from web to mobile	

PROJECTS

SpeechServe <i>Python, TensorFlow, NumPy</i>	August 2024
- Built an end-to-end speech recognition system using TensorFlow and CTC-based forced alignment, training a deep neural network acoustic model on variable-length audio sequences to produce frame-level transcriptions - Implemented beam search decoding and evaluation pipelines, achieving 36.54% CER on the dev set and enabling accurate frame-level alignment of audio to transcript timing	
SolarEnergyViz.tech <i>Python, Pandas, Prophet, JavaScript</i>	September 2023
Built an ML-powered solar panel analytics platform processing 12 years of historical data using Pandas and Prophet for automated cleaning and time-series forecasting, awarded Best Data Visualization at Hack UIowa	

SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL (Oracle), C++
Technologies: Spring Boot, Hibernate, React, Next.js, Angular, Kafka, REST APIs, Microservices, Apigee, Redis, MongoDB, DynamoDB, AWS (S3, CloudFront, EC2, Lambda), Docker, Kubernetes, Helm, OpenShift, Terraform, Ansible, PyTorch, Pandas, LLM Agents, RAG, Prompt Engineering
Tools: Gradle, Maven, Postman, Splunk, JUnit, TestNG, Cucumber, Karate, Harness, GitHub Actions, Prometheus, Grafana

EDUCATION

University of Iowa <i>B.A. in Computer Science</i>	Iowa City, IA <i>Dec 2024</i>
--	----------------------------------

CERTIFICATIONS

NVIDIA Certified Associate – AI Infrastructure and Operations (NCA-AIIO), AWS Data Engineer – Associate (DEA-C01), AWS Solutions Architect – Associate (SAA-C03), AWS Developer – Associate (DVA-C02), AWS Cloud Practitioner (CLF-C02)
